

General information about PMKEU "PATRIOT"

PMKEU "PATRIOT" includes the Information and Calculated System (ICS) "Energy Audit"; and "Practical Guide to Energy Saving for Industrial, Construction and Housing and Communal Services of Ukraine".

"Practical guide to energy saving for industrial, construction and housing and communal services of Ukraine" is published in a volume of 700 pages, including tables, diagrams, figures and contains sections:

1. Terms.
2. Power supply and electricity consumption.
3. Heat sources and heat supply networks.
4. Heating, ventilation and air conditioning.
5. Water supply and sewerage.
6. Energy saving in buildings.
7. Economic justification of energy saving measures.

The information and calculation system "Energy Audit" is designed for economic justification of energy saving projects and includes an interactive database of energy manager and a program for automated calculation of economic indicators of the project.

PMKEU "PATRIOT" allows you to justify decisions on the implementation of energy saving measures and energy efficiency in industry and housing and communal services and choose the best investment options according to the criteria of investment and payback period.

PMKEU "PATRIOT" is focused on application in design and survey companies, industrial and housing and communal services, government administrations and institutions. We hope that over time, this complex will become a central part of the training of Ukrainian specialists in the field of energy efficiency, a practical and permanent tool for planning, design, implementation and evaluation of energy saving measures in Ukraine.
